

Amazing happens when you safeguard your data with Cisco Secure Firewall.

A Leader in Enterprise Firewall Platforms

Cisco has been recognized as a Forrester Wave enterprise firewall leader, ranking first for their current offering. They received top marks for zero trust, workload protection, threat intelligence, cloud-delivered components, micro-segmentation, Firewall as a Service and usability. Cisco was also named a leader in platform strategy and earned a perfect score for product vision.

CDW helps customers design and deploy Cisco Secure Firewall solutions through our expert-led assessment and implementation services. Our Cisco-certified professionals can step in when you need deployment or migration expertise, an experienced team for implementation, or ongoing support.

New Cisco Secure Firewall Features (version 7.6)

See More, Detect Faster

- SnortML exploit detection framework to protect against entire vulnerability classes
- RAVPN dashboard to offer visibility into hybrid workers' networks
- Encrypted Visibility Engine to detect without TLS decryption

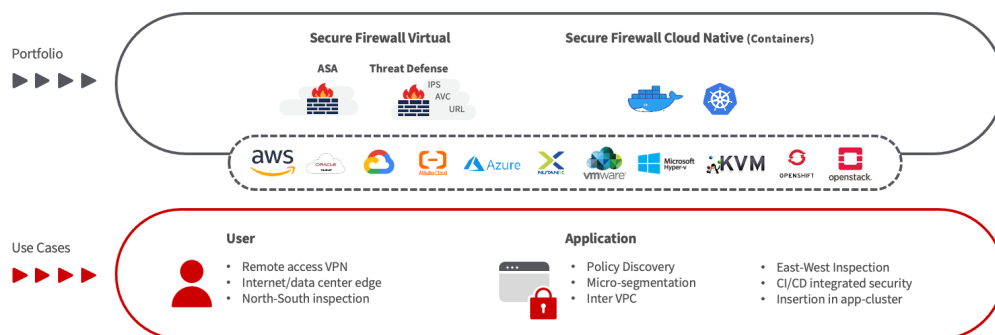

Easy Operation

- Integrated SD-WAN features like SD-WAN Wizard and support for SD-WAN device templates for scalable remote branch provisioning
- AI Assistant to manage Secure Firewall devices with configuration insights and automation guides

Increased Performance

- Clustering support in Azure seamlessly to scale on demand
- MITRE rule groups to increase SecOps performance
- Auto-tunnel to Umbrella to automate IPsec offload, increase efficiency and unify visibility

Protect Users and Applications at Scale with Cisco Secure Firewall

Selectively insert cloud security controls in public and private clouds and HCI.
